

Ebola virus-like particles (EBOV VLP)

Catalog #: 0550-001

Lot #: 1902002

Description: Virus-like Particles (VLP's) expressing recombinant Ebola virus (EBOV) glycoprotein (GP), nucleoprotein (NP), and matrix protein (VP40). These VLP's are produced in Sf9 insect cells through infection with a recombinant baculovirus.

Storage: 2-3 weeks at -20°C, -80°C long term

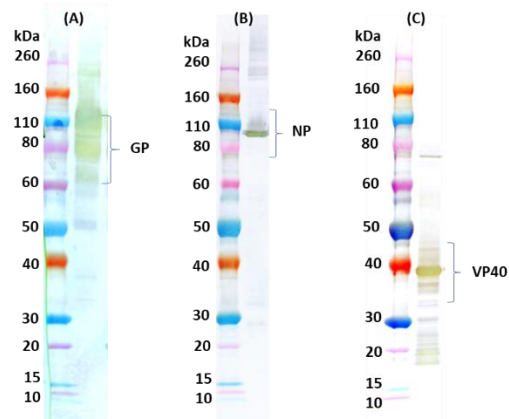

Size: 1 mg of protein supplied in PBS (supplemented with arginine and glutamic acid) at a concentration of 1.938 mg/mL.

Endotoxin: 1.071 Endotoxin Units/mg

Relevance: Since these VLP's mimic Ebola virus but do not contain genetic material, thus are not infectious and make an ideal candidate as a vaccine and as a tool to enhance filovirus research.

Related Products: IBT provides a wide array of anti-filovirus specific antibodies and other infectious disease reagents. Please see our website, www.ibtbioservices.com for more details.

Western Blot Detection

Western Blot was used to confirm the presence of EBOV-specific GP, NP and VP40 in the VLP. VLP sample was heat-denatured under reducing condition and loaded at 1 µg/lane.

(A) GP was detected as a broadly-diffused band 60-110 kDa using 50 ng/mL of anti-EBOV GP rabbit Pab (cat# 0301-015)

(B) NP was detected as a single sharp band at ~90 kDa using 100 ng/mL of anti-EBOV NP rabbit Pab (cat# 0301-012)

(C) VP40 was detected as a single sharp band at ~40 kDa using 50 ng/mL of anti-EBOV VP40 rabbit Pab (cat# 0301-010)

Intended for research use only, not for human, therapeutic, or diagnostic applications.
