

Recombinant Influenza Hemagglutinin (H9 Hong Kong) Full-Length Glycoprotein (rHA GP)

Catalog #: 1503-001

Lot #: 1309005

Description: Recombinant, Influenza Hemagglutinin Full-Length Glycoprotein (rHA GP) from virus strain A/Hong Kong/33982/2009 (H9N2). Recombinant HA is supplied as an affinity purified protein. rHA is produced in Sf9 insect cells using baculovirus for expression and is purified by FPLC.

Storage: 2-3 weeks at -20°C, -80°C long term

Size: 50 µg of protein is supplied at a concentration of 0.33 mg/mL (by BCA) in Tris buffered saline plus 0.01% non-ionic detergent. The theoretical molecular weight of the protein is ~63 kDa, without glycosylation. Because of the highly glycosylated nature of this protein, migration in an SDS-PAGE gel is slowed resulting in broad, diffuse bands representing differing glycosylation forms.

Purity: Residual baculovirus GP64 co-purifies with the affinity purified rHA GP and was determined to be less than 10% of the total protein.

Relevance: Recombinant hemagglutinin glycoprotein provides a control protein for immunoassays and a tool to enhance Orthomyxovirus research.

Western Blot: Quality control testing demonstrates detection of GP null under reduced conditions when using anti-H9 influenza antiserum.

Hemagglutination with Turkey Red Blood Cells: HA Titer 1:32,768

SDS-PAGE

SDS-PAGE and stain demonstrating 3 µg of rHA protein under reducing conditions

Western Blot Detection

Western blot detection of rHA at 800 ng when detected with anti-H9 ferret antiserum (1:50 dilution) (B) and an anti-ferret AP conjugate followed by substrate.

Product intended for research use only. Not for human, therapeutic, or diagnostic applications.
